1 CoNLL Active Learning Graph

In figure 2 of the published figure, for the CoNLL dataset the F1 for uncertainty based active learning at dataset size 41 is greater than the F1 at dataset size 91. This is due to a bug isn't the plotting script ignoring 0s. Once this is fixed, we see that the trend for F1 is consistent with the other datasets. This does not affect the final findings of our paper nor any conclusions made from this data. We have updated the figure on the copies we host on our personal sites.
